

# CCTV Mobile App Installation and Configuration

## Application Download

The application for the CCTV system is available for both Android and iPhone and can be downloaded from the following links:

### iPhone/iPad

<https://itunes.apple.com/us/app/ivms-4500-lite/id441697527?mt=8>

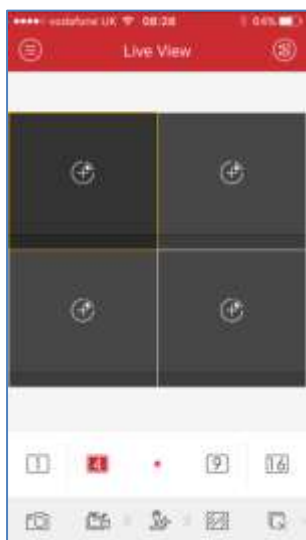

### Android:

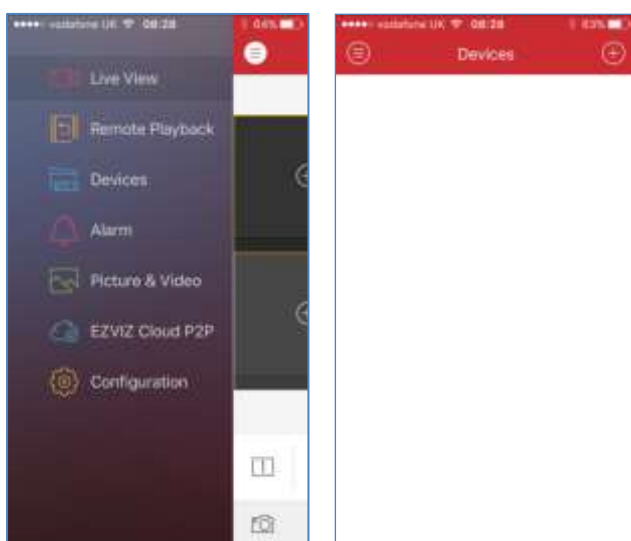

[https://play.google.com/store/apps/details?id=com.mcu.iVMS&hl=en\\_GB](https://play.google.com/store/apps/details?id=com.mcu.iVMS&hl=en_GB)

## Configuration

Once you have downloaded the application the first page should look like this:

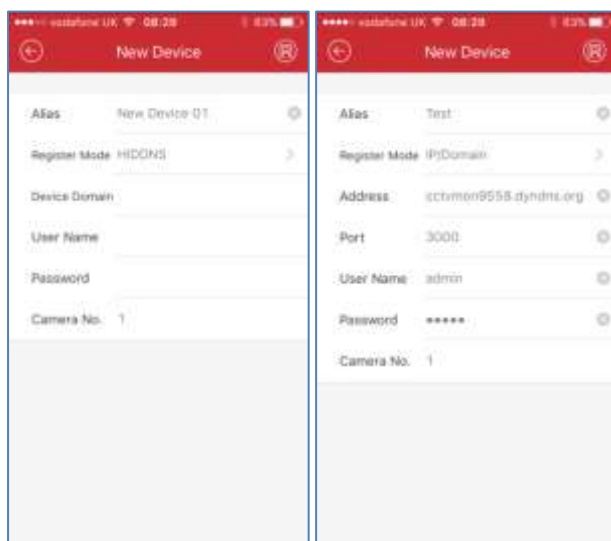

**Add the Recorder Unit** - To add the CCTV Recorder to the app for viewing, select the circle with the 3 horizontal lines in the top left of the screen and then press "Devices".

Next, enter the details for the recorder into the “New Device” window. You will need to change the “Register Mode” from “HiDDNS” to “IP/Domain”.

The Alias can be input as anything (EG. CCTV or Cameras) but the address/port/username/password need to match perfectly with what is provided.

Once you have entered the details, press the “Save” icon in the top right corner and the live feed will begin to play.

If there are any problems with the connection or you need any further details our support team are available 24 hours a day.

Simply call us on **01924849319** if you have any questions or need assistance.
