

# INSTALLATION

## HD CCTV

Utilising state-of-the-art, high resolution 1080p / HD cameras, the IP rated products can handle any harsh environment. Cameras are housed in professional equipment cabinets and have the ability to detect and react to intruders.

## SOLAR-GUARD

Our Solar-Guard Site Security System represents the very latest evolution in our stand alone CCTV systems. Designed to be used on construction sites without access to mains power, generators or equipment cabins.

## BATTERY BACKUP

Some construction sites are required to shut down generators at night or over weekend (e.g. for environmental or residential reasons) often leaving them vulnerable to theft and vandalism. To combat this, our R&D team developed a stand-alone battery back-up solution.

## BATTERY SYSTEMS

Where mains power is unavailable and wired detection is not an option, our Battery CCTV System offers sites a complete site security system. Once fitted, the system will send a video clip directly to our monitoring station for immediate review and action.
