

# SERVICING

## ASSESSMENT

We will carry out regular and comprehensive assessments of the overall condition of your CCTV equipment. Initially carried out remotely by our technicians, we will carry out an Electronic System Health Check to ensure that all cameras, detectors and alarms are working correctly.

## TROUBLESHOOTING

If during our Electronic System Health Check we find that your CCTV system requires attention, or that you report a failure to us (e.g.: you accidentally damage a camera or you cut thought essential system wiring) we will to arrange to send an engineer to your site to rectify the fault.

## EQUIPMENT MAINTENANCE

As your site develops it can cause difficulties with the CCTV equipment – e.g. new buildings can block camera views or detection ranges. Our aftercare service keeps a close eye on your site to ensure your security equipment is always in the correct location to keep your site secure.

## RECONFIGURATION

Whatever the size of your CCTV system, we will work closely with you to ensure that it is kept in a fully serviceable condition, allowing you to benefit from the peace of mind it delivers for many weeks, months and years to come.
